

**In the Claims**

Please substitute the below amended claims for claims 35 and 43.

17 35. (Amended) A method for inactivating a target cell in the presence of T cells comprising bringing the target cell and a T cell in contact with a superantigen in the presence of an immune modulator wherein at least one of the superantigen and immune modulator is conjugated to a targeting moiety that targets the target cell.

B 8 43. (Amended) The method of claim 1, wherein the superantigen is modified to have decreased seroreactivity in human sera compared to the corresponding wild type superantigen.
